SUMMARY

Data Engineer building scalable, production-grade data pipelines (**20M+ transactions/month**). Experienced with **Snowflake**, **dbt**, real-time ingestion, and **data quality automation**.

WORK EXPERIENCE

Data Engineer, *Aramark*

Philadelphia, PA | May 2025–Present

- Owned end-to-end migration from raw **Snowflake SQL** to **dbt (models, tests, documentation)**; improved maintainability and reliability across pipelines processing **20M+ transactions/month**.
- Designed and built **real-time and batch ingestion pipelines** using **Snowflake Streams**, **Snowpipe**, and **Azure Event Grid**; implemented **dimensional models (star schema)** powering **2,000+ locations**.
- Developed **SQL-based rules and alerting engine** producing **1,000+ alerts/day** for fraud, hardware health, and reconciliation monitoring; increased match accuracy by **35%** and reduced downstream operational noise.
- Partnered with analytics, finance, and operations stakeholders to productionize datasets, define SLAs, and enforce **data quality checks**.

Software Engineer, *WebstaurantStore*

Remote | May 2024–May 2025

- Built internal **test automation infrastructure** using **Java**, **Selenium Grid**, and **Azure DevOps CI/CD**; enabled **parallel execution** and reduced full regression cycles by **50%**.
- Automated **50+** high-impact test cases with **Chrome-first coverage**, cutting **manual QA effort by 40%** per release and accelerating deployment velocity.
- Wrote production **SQL (SQL Server)** for validation, monitoring, and defect analysis; reduced **post-release defects by 30%** by catching data and logic issues pre-deploy.

Software Developer Intern, *National Public Radio (NPR)*

Washington, DC | June 2022–August 2022

- Implemented Apple **Smart App Banner** across large-scale PHP templates on npr.org; shipped via **feature flags** and staged rollout to mitigate production risk.
- Built and launched the **NPR One** landing page using accessible **HTML5**, **CSS**, and **JavaScript**; improved app discoverability with structured metadata and conversion-focused CTAs.
- Deployed changes through **Git/Jira**-based workflows using **Docker-** and **Kubernetes-backed pipelines**; collaborated cross-functionally for release validation and monitoring.

EDUCATION

B.S. in Computer Science, Minor in Media Arts and Sciences
Arizona State University

May 2025
Tempe, AZ | **GPA: 4.00**

OPEN SOURCE

HackKit

Open Source | *Node.js*, *MongoDB*, *Docker*

- Built backend **data layer and aggregation pipelines** for an open-source hackathon platform; designed **MongoDB schemas** supporting real-time scoring for **5,000+ participants** across national events.

LEADERSHIP

Director, *sunhacks (ASU)*

Tempe, AZ

- Led ASU's flagship hackathon with **600 attendees (2× YoY growth)**; managed a **\$40K budget** and coordinated **15** volunteers across operations and logistics.
- Secured sponsorships with **Amazon**, **Garmin**, and **General Dynamics**; designed scalable check-in and judging workflows to support rapid event execution.

TECHNICAL SKILLS

Data Modeling: Dimensional modeling (star schema), analytics engineering

Data Platforms: Snowflake, dbt, Palantir Foundry, PostgreSQL, SQL Server, MongoDB

Languages: SQL, Python, Java, C++, TypeScript

Cloud & Ingestion: Azure (Queues, Event Grid, Functions, DevOps), Snowpipe, Snowflake Streams

Tools: Git, Docker, Kubernetes, Jira, Confluence
