SUMMARY

Data engineer building real-time event-driven ingestion pipelines and alerting systems on dbt, Snowflake and Azure. Interested in product-focused teams where data infrastructure directly drives product decisions and user behavior.

WORK EXPERIENCE

Data Engineer, *Aramark*

Philadelphia, PA | May 2025–Present

- Engineered anomaly-detection and alerting systems in SQL + dbt generating 1,000+ alerts/day across 2,000+ locations; raised reconciliation accuracy by 35% and reduced manual investigation effort for operations teams.
- Developed event-driven ingestion and orchestration pipelines using Snowpipe, Snowflake Streams, Azure Event Grid, Logic Apps, and API integrations to support near-real-time operational workflows and automated processing.
- Standardized onboarding of new ingestion workflows by building reusable dbt templates and containerized deployment patterns with Azure Container Apps, improving deployment consistency and reducing engineering overhead.

Software Engineer, *WebstaurantStore*

Remote | May 2024–May 2025

- Delivered a test-automation and release platform using Java, Selenium Grid, and Azure DevOps CI/CD that reduced regression cycles by 50% and elevated release confidence.
- Developed validation tooling, SQL-based test workflows, and monitoring systems that surfaced production defects pre-release and bolstered deployment reliability.
- Partnered with QA and engineering teams to improve release visibility, automate repetitive testing workflows, and streamline CI/CD processes.

Software Developer Intern, *National Public Radio (NPR)*

Washington, DC | June 2022–August 2022

- Owned and launched the NPR One consumer landing page end-to-end using HTML5, CSS, and JavaScript; boosted discoverability with structured metadata and conversion-focused CTAs.
- Shipped Apple Smart App Banner across large-scale PHP templates using feature flags and staged rollout to measure impact and reduce risk.

PROJECTS

Portfolio Instrumentation & Insights

Personal Project | TypeScript, PostHog, Next.js

- Designed a custom event-tracking pipeline for my portfolio using PostHog to analyze visitor funnels, engagement patterns, traffic sources, and conversion events through dashboards and lightweight alerting.

JustAteIt

Personal Project | Expo, Next.js, TypeScript

- Launched a cross-platform dish-tracking app with Expo and Next.js focused on repeat-visit behavior and taste preferences; instrumented analytics and event tracking across mobile and web workflows.

HackKit

Open Source | Node.js, MongoDB, Docker

- Developed a real-time hackathon scoring platform using MongoDB aggregation pipelines and resilient backend workflows to support large-scale live judging and scoring operations.

WikiGraph

Personal Project | D3.js, Data Visualization

- Visualized Wikipedia browsing sessions with an interactive D3.js graph to explore navigation depth, content relationships, and user exploration patterns.

LEADERSHIP

Director, *sunhacks (ASU)*

Tempe, AZ

- Scaled ASU's flagship hackathon to **600 attendees (2× YoY)**, managed a **\$40K** budget, led **15** volunteers, and closed sponsorships with **Amazon, Garmin, and General Dynamics**.

EDUCATION

B.S. in Computer Science, Minor in Media Arts and Sciences

Arizona State University

May 2025

Tempe, AZ | **GPA: 4.00**

TECHNICAL SKILLS

Data & Analytics: SQL, Python, dbt, Snowflake, PostgreSQL, MongoDB, PostHog

Infrastructure: Docker, Kubernetes, Azure Container Apps, Event Grid, Logic Apps, CI/CD

Languages & Frameworks: TypeScript, Next.js, Node.js, React, Expo
