WORK EXPERIENCE

Data Engineer, *Aramark*

Philadelphia, PA | May 2025–Present

- Designed and implemented **real-time and batch ingestion pipelines** using **Snowflake Streams**, **Snowpipe**, and **Azure Event Grid**; built **star schema dimensional models** powering analytics across **2,000+ locations**.
- Led migration of production data pipelines from handwritten **Snowflake SQL** to a modular **dbt** architecture, designing reusable models, macros, automated tests, and documentation; reduced compute costs across pipelines processing **20M+ transactions/month**.
- Developed **SQL-based rules and alerting engine** generating **1,000+ alerts/day** for fraud detection, hardware health, and reconciliation; tuned alert logic to increase match accuracy by **35%** and reduce downstream noise.
- Implemented automated testing, incremental processing, source freshness monitoring, and CI/CD validation for production data pipelines; built Microsoft Teams/email alerting to improve pipeline reliability and observability.

Software Engineer, *WebstaurantStore*

Remote | May 2024–May 2025

- Wrote production SQL Server queries for validation, defect monitoring, and performance analysis; identified slow query patterns pre-deploy and reduced post-release defects by 30%.
- Extended internal test automation framework (Groovy, Selenium Grid, Azure DevOps CI/CD) and developed 50+ automated test cases with Chrome-first coverage, cutting manual QA effort 40% per release.

Software Developer Intern, *National Public Radio (NPR)*

Washington, DC | June 2022–August 2022

- Implemented Apple Smart App Banner across NPR's PHP templates via feature flags and staged rollout; deployed through Docker/Kubernetes pipelines.
- Launched the NPR One landing page with structured metadata to boost app discoverability.

EDUCATION

B.S. in Computer Science, Minor in Media Arts and Sciences

Arizona State University

May 2025

Tempe, AZ | **GPA: 4.00**

PROJECTS

JustAteIt

Personal Project | *FastAPI, PostgreSQL, AWS ECS/S3, Clerk*

- Built a microservices backend (API gateway + 3 FastAPI services) with a versioned Postgres schema and RLS; deployed to AWS ECS Fargate with S3-backed media uploads and CI-enforced schema/seed invariant tests.

HackKit

Open Source | *Node.js, MongoDB, Docker*

- Designed and implemented **MongoDB aggregation pipelines** and schemas for an open-source hackathon platform; optimized query performance for real-time scoring across **5,000+ participants** at national events.

Portfolio Analytics Engine

Personal Project | *Next.js, Upstash Redis, PostHog, Resend*

- Built a visitor analytics backend with sessionization and scoring algorithms for engagement, user behavior, and bot detection, powering a real-time admin dashboard and daily summary emails via Resend.

LEADERSHIP

Director, *sunhacks (ASU)*

Tempe, AZ

- Led ASU's flagship hackathon with **600 attendees (2× YoY growth)** and a **\$40K budget**; secured sponsorships with **Amazon, Garmin, and General Dynamics**.

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, SQL, C++

Backend & Data: FastAPI, PostgreSQL, MongoDB, SQL Server, Snowflake, dbt, Redis

Cloud & DevOps: AWS (ECS, S3), Azure, Docker, Kubernetes, GitHub Actions

Other: Palantir Foundry, Next.js, Jira, Confluence
