SUMMARY

Data Engineer designing and owning scalable analytics infrastructure and real-time data pipelines processing 20M+ transactions/month. Specialized in Snowflake + dbt analytics engineering, dimensional modeling, and production-grade data quality systems that improve reliability, reconciliation accuracy, and reporting performance at enterprise scale.

WORK EXPERIENCE

Data Engineer, Aramark Philadelphia, PA | May 2025–Present

- Led migration from ad-hoc Snowflake SQL to a modular **dbt analytics framework**, standardizing transformations and data quality across pipelines processing **20M+ transactions/month**.
- Architected hybrid **real-time + batch** ingestion using Snowflake Streams, Snowpipe, and Azure Event Grid; designed **star schema models** supporting analytics across **2,000+ locations**.
- Engineered a SQL-based fraud and reconciliation engine generating **1,000+ alerts/day**, increasing match accuracy by **35%** and reducing manual investigation.
- Developed enterprise reconciliation workflows in **Palantir Foundry**, enabling automated monitoring and anomaly detection across **2,000+ sites**.

Software Engineer, WebstaurantStore Remote | May 2024–May 2025

- Wrote production SQL (SQL Server) for validation, defect monitoring, and performance analysis; identified slow query patterns pre-deploy and reduced post-release defects by 30%.
- Extended internal test automation framework (Groovy, Selenium Grid, Azure DevOps CI/CD) and automated 50+ high-impact test cases with Chrome-first coverage, cutting manual QA effort 40% per release and regression cycles 50

Software Developer Intern, National Public Radio (NPR) Washington, DC | June 2022–August 2022

- Implemented Apple Smart App Banner across NPR's PHP templates via feature flags and staged rollout (still live sitewide); deployed through Docker/Kubernetes pipelines
- Launched the NPR One landing page with structured metadata to boost app discoverability.

EDUCATION

B.S. in Computer Science, Minor in Media Arts and Sciences May 2025
Arizona State University Tempe, AZ | **GPA: 4.00**

OPEN SOURCE

HackKit Open Source | *Node.js, MongoDB, Docker*

- Designed backend aggregation pipelines and optimized MongoDB schema architecture to support real-time scoring for 5,000+ participants, ensuring low-latency updates during live national hackathons.

LEADERSHIP

Director, sunhacks (ASU) Tempe, AZ

- Scaled ASU's flagship hackathon to **600 attendees (2× YoY growth)**; managed **\$40K budget** and led **15** volunteers.
- Secured sponsorships from **Amazon, Garmin, and General Dynamics**; streamlined check-in and judging workflows.

TECHNICAL SKILLS

Core: SQL, Snowflake, dbt, Python

Data Modeling: Dimensional modeling (star schema), analytics engineering

Data Platforms: Palantir Foundry, PostgreSQL, SQL Server, MongoDB

Cloud & Ingestion: Azure (Event Grid, Functions, DevOps), Snowpipe, Snowflake Streams

Languages: Java, C++, TypeScript

Tools: Git, Docker, Kubernetes, Jira, Confluence
